Tilt Position Sensor
in Lift & Access Application - Mobile Cranes
Lift and Access Applications
- Mobile Cranes

Reliability and safety are critical considerations for a mobile crane operator. Stable positioning, safe lifting, and the need to function reliably in extreme environments, demand best in class measurement equipment.

The VTS series of tilt sensors from Curtiss-Wright uses the latest advances in Inertial Measurement Unit (IMU) technology to reliably measure tilt angle for improved safety. With the IMU’s combination of three gyroscopes and three accelerometers, plus advanced filtering from Curtiss-Wright, the VTS series enables designers to maximise their lifting capability, productivity and safety.

Product Solutions from Curtiss-Wright

**Reliability**
- Latest IMU technology
- Precise measurement
- Fast-acting software algorithms
- Thermally compensated

Boosts machine performance and uptime by enabling enhanced monitoring and control

**Safety**
- MTTFd >385 years
- Dual sensor architecture
- Designed for compatibility with safety-rated systems e.g. EN13849

Plays a major role in improving safety
**Value to OEM Customers**

**Performance**
- Vibration-tolerant for dynamic applications, reducing nuisance trips and enhancing productivity
- Thermally compensated, ensuring consistency and improved accuracy to optimise productivity

**Durability**
- IP67/69K enclosure, ensuring operation in extreme environments and reducing total cost of ownership
- Solid-state ‘fit and forget’ technology, increasing time between vehicle services and enhancing product life cycle

**Easy Integration**
- 6-48Vdc input range, compatible with 12 and 24Vdc systems for ease of integration
- Integrated, industry-standard connector and simple 3-bolt mounting for easy, reliable, and cost effective installation

**Other Applications**

**Construction Equipment**
- Improves vehicle stability monitoring, enhancing safety and reducing tip-over risk
- Improves implement monitoring, aiding in the automation of functions such as return to dig, accurate grading, and precision digging

**Agricultural Equipment**
- Improves vehicle and attachment position monitoring, enhancing productivity and safety
- Aids in the automation of functions and attachments such as precise harvesting height and cutting angle

**Material Handling Equipment**
- Improves vehicle stability monitoring, enhancing safety and reducing tip-over risk
- Improves load monitoring, enhancing and aiding in the automation of functions such as load stabilisation and levelling

**Other CW Products for Mobile Cranes**
- Joysticks JC6000
- Power Electronics WTI D260
- Rotary Sensors WM-H10
- Electronic Throttle Controls
- Shifters
- HMI Consoles
Important Information: Whilst Curtiss-Wright has designed these sensors to meet a range of applications it is the responsibility of the customer to ensure it meets their specific requirement. Curtiss-Wright makes no warranty or representation in respect of product fitness or suitability for any particular design application, environment, or otherwise, except as may subsequently be agreed in contract for the sale and purchase of products. Customers should therefore satisfy themselves of the actual performance requirements and subsequently the product’s suitability for any particular design application and the environment in which the product is to be used. Continual research and development may require change to products and specification without prior notification. All trademarks acknowledged.
